- ✓ **Parging**
- ✓ **Cold Rooms**

PAVER RELEVELING & SEALING

THE PROCESS

The process of paver releveling and sealing involves several key steps to ensure the longevity and beauty of your outdoor spaces. Our team of experts will assess the level and alignment of your pavers to identify any areas that need to be adjusted. We will clean the surface to remove any dirt, debris, or other contaminants before starting the work. Canada Wide Exteriors only applies high-quality sealers to the surface of the pavers, which protects against weather damage and staining. The final step involves a thorough inspection of the completed work to ensure that all of our high standards have been met. Our goal is to provide you with long-lasting results that revitalize and enhance the look and functionality of your outdoor spaces.

EXTERIOR STUCCO

THE PROCESS

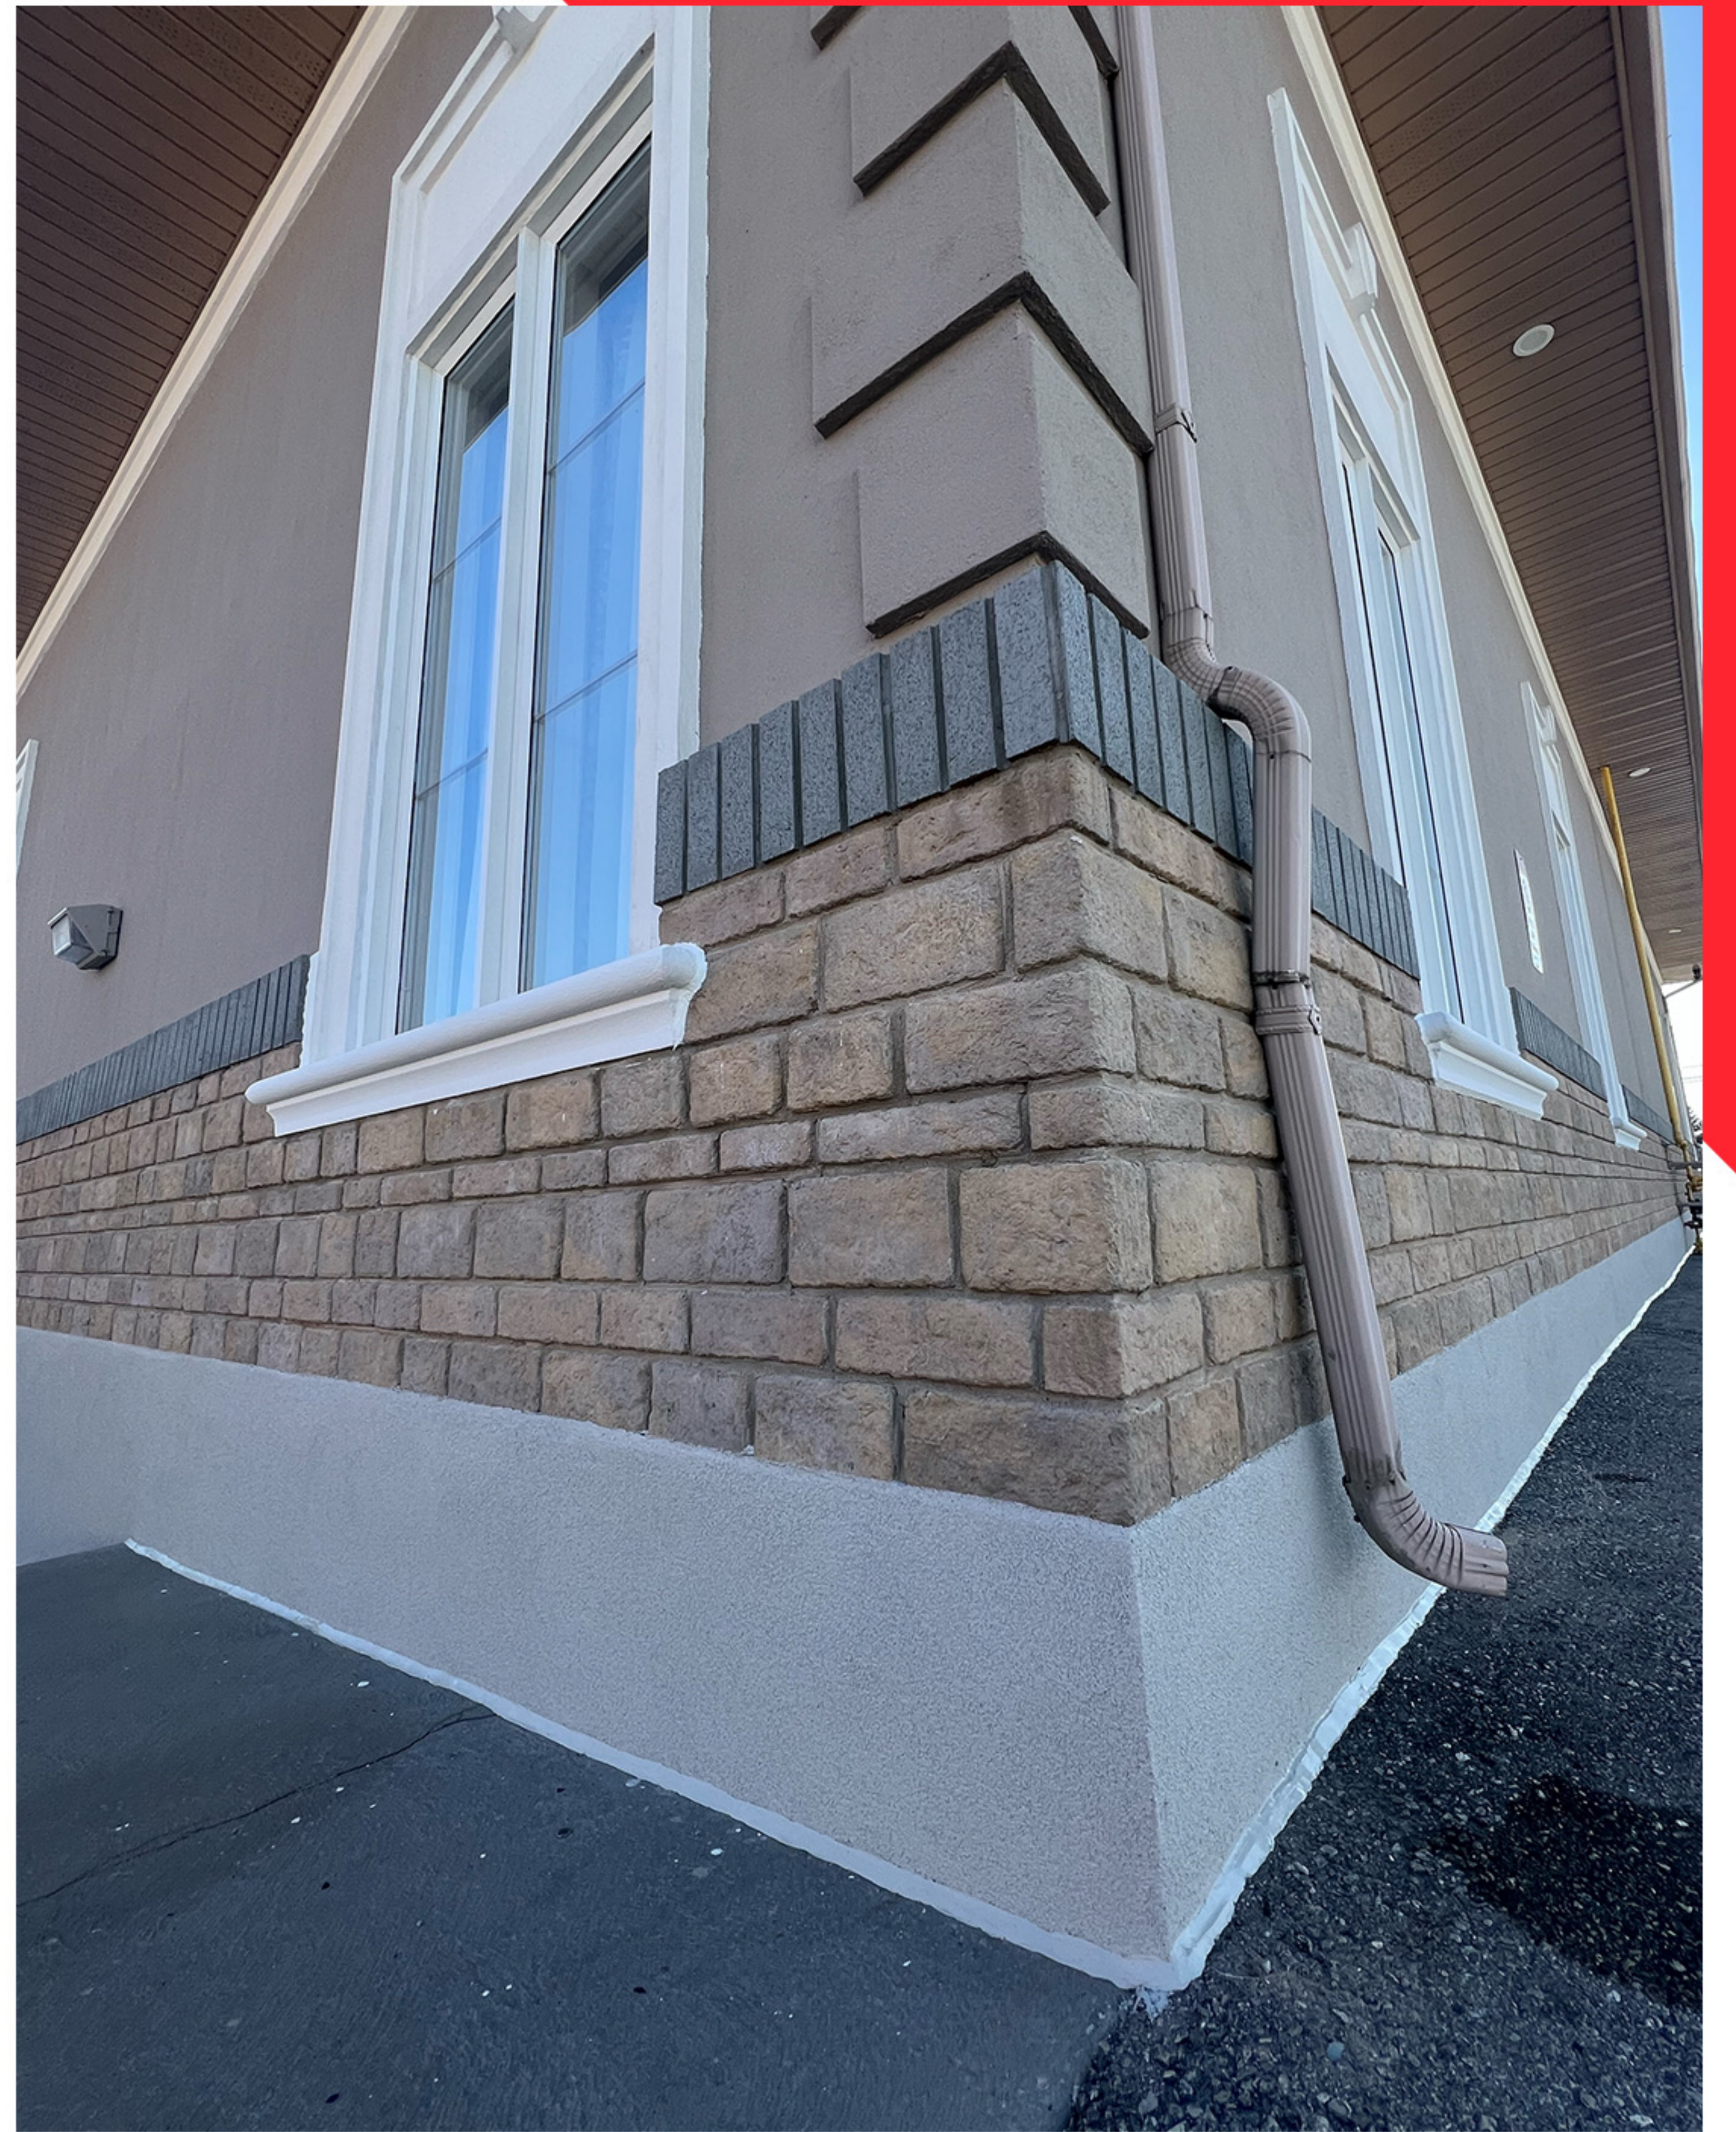

At Canada Wide Exteriors, our exterior stucco process is designed to provide your property with a durable and attractive finish that will enhance its appearance and increase its value. Our team of experts starts by carefully preparing the surface of your home, which includes repairing any damage, cleaning it thoroughly, and making sure it is properly sealed before starting. The finish coat can be customized to match your desired colour and texture, and is then sealed for added protection against the elements. Throughout the entire process, we maintain the highest standards of workmanship to ensure that your home is left looking its best.

PARGING

THE PROCESS

The process of parging involves adding a thin layer of cement to the surface of concrete or masonry to refine it. This technique not only provides an extra layer of protection to the foundation of your home against harsh weather conditions, but also enhances the overall strength of the structure. By undergoing parging, your home's foundation will be better equipped to withstand the test of time and provide a solid base for the rest of the building. Additionally, it can also be used as a solution for foundation repair, helping to fill cracks and reinforce weakened areas, preventing further damage from occurring.

COLD ROOMS

THE PROCESS

The process of installing or maintaining a cold room with Canada Wide Exteriors is straightforward and efficient. Our team of experts will assess your specific needs and requirements, taking into consideration the size, location, and usage of the room. We'll design a customized solution that fits your budget and timeline while ensuring optimal functionality and efficiency. Once the design is approved, our team of skilled technicians will begin the installation process, using the highest quality materials and equipment to ensure a seamless and reliable cold room solution.
